THE SAFEST TMA TRUCK EVER

ROYAL STANDS BEHIND THE QUALITY OF EVERY TRUCK WE

PRODUCE. Our trucks surpass the standards and certification processes of even the strictest state regulations, and our unique TMA bodies have been engineered to successfully sustain high speed impacts.

The use of crash attenuators should be used anytime you are restricting the flow of traffic, and on job sites that are deemed as high hazard such as: night projects, heavily travelled roads, the initial phase of a long term project, and control signs and devices are being set out or picked up.

WHETHER NEW OR USED, EACH ROYAL TRUCK BODY DESIGN IS COMPLETELY MODULAR AND CUSTOMIZABLE.
